(54) DATA BROADCAST TRANSMISSION SYSTEM AND DATA BROADCAST RECEIVER

(57)Abstract:

PROBLEM TO BE SOLVED: To provide the data broadcast transmission system which transmits pluralities of data files whose display method designation is changed in a data broadcast utilizing gaps of television video signals and in which a receiver selects/displays the data file in matching with its own display capacity so as to have provision for various receivers and to provide the data broadcast transmitter-receiver.

SOLUTION: In the receiver, pluralities of data files whose display methods are changed are stored in a storage section 411, and when the operator uses a utilization file setting section 413 to designate files in matching with a display capability of the receiver, only matched files are displayed by a browser 412. The mismatched files are eliminated from the storage section 411 by a delete command generating section 410.
